Write a data driven program to register 5 customers user into the system using the parameterization with example method in the given website

https://www.globalsqa.com/angularJs-protractor/BankingProject/#/manager/addCust

Guideline:

Step 1. Create a simple web driver script to add a single user.

Step 2. Create a feature file, Create a step definition file and runner.

Step 3. Perform a dry run. Use the console output to update the step definition with required methods

Step 4. Use the simple code generated in step 1 to fill in the methods.

Step5. On success make a copy and convert it to parameterized code note change the keyword to scenario outline and use keyword example in this step.
